

## How does Ecocycle™ Technology improve my turf netting?

Conwed's netting with Ecocycle Technology is "programmed" to provide the end user with the same useful life, as standard netting, with no loss in properties. Yet after the intended useful life the netting breaks down faster providing an increased value to the turf grower and their customer.

The netting integrity is not compromised during its functional life, but provides the added benefit of controlled degradability.

## Why use Conwed turf netting with Ecocycle™ Technology?

Ecocycle Technology addresses the market's request for an affordable degradable netting. SodNet® and SodWrap™ turf netting made with Ecocycle Technology is programmed to degrade when it is no longer needed, with or without the requirement of direct sunlight making both turf nettings a greener solution. Due to Ecocycle Technology, turf reinforcement netting and big roll turf wrap deliver the affordable, reliable performance you expect while reducing environmental impacts and entanglement with equipment.

- Netting with Ecocycle Technology creates an opportunity to differentiate your turf products.
- Minimizes the chance of entanglement in turf maintenance equipment.
- Minimizes trip hazards in high traffic areas where the turf is heavily worn.
- After the initial turf installation, the netting will not interfere with future landscape alterations.
- UV exposure is not required for the degradation process.
- Costs are similar to conventional plastic netting.

## How does Ecocycle™ Technology accomplish this?

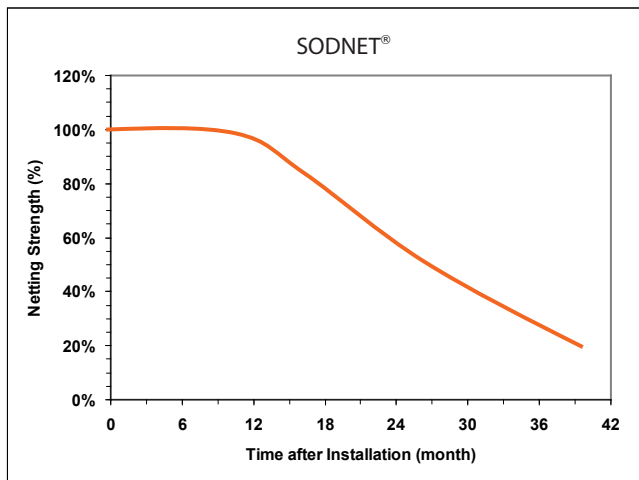

With Ecocycle Technology, Conwed is able to modify the netting enabling it to lose strength at a controlled rate. During the useful life, the netting is stabilized to prevent the premature onset of the loss of strength. As the net ages beyond its design life, with ambient heat and oxygen, the netting becomes brittle breaking into small fragments. The fragments from the initial degradation, under the proper conditions, can be broken down further until they are digestible by microbes in a second stage of biodegradation.

## Ask for Ecocycle™ Technology in your turf netting.

SodNet® & SodWrap™ netting based on Ecocycle Technology offers one of the most effective and economical ways to address increasing concerns over the environmental impact of single use plastic products.

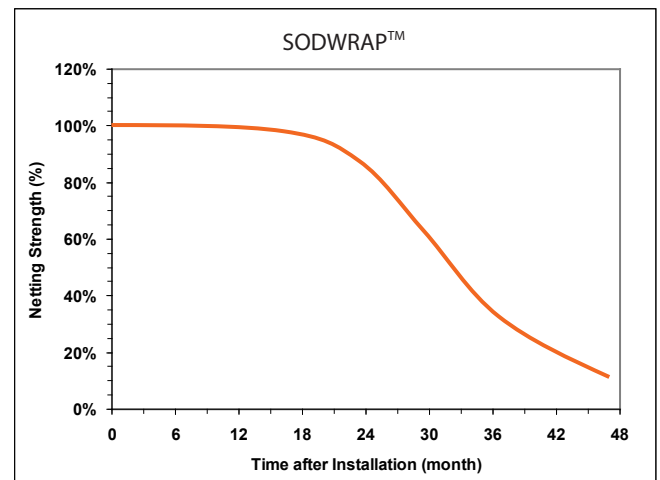

Ask for Ecocycle Technology, the new standard in turf netting.

## Ecocycle™ Technology Degradation Charts

*Degradation rate of SodNet® made with Ecocycle™ Technology chart assumptions.*

- Recommended storage guidelines were followed.
- Moderate sunlight.
- Typical turf growing conditions.
- Actual degradation rate will vary with environmental conditions.

*Degradation rate of SodWrap™ made with Ecocycle™ Technology chart assumptions.*

- Recommended storage guidelines were followed.
- Zero or very limited sunlight exposure.
- Actual degradation rate will vary with environmental conditions.
